

Explore the heart of Argentine farming systems with Aapresid

The institution invites international visitors to discover the heart of Argentine farming systems through a field tour in the main productive region. An opportunity to learn about cutting-edge production models, leaders in soil care, innovation and sustainability.

In the run up to the 32° *Aapresid Congress*, with the strength of *Expoagro*, the institution is organizing a field trip for people and institutions from abroad who are interested in learning about Argentina's productive models.

The tour, which will take place on Tuesday, August 6th, will be an opportunity to discover the heart of Argentine agricultural systems through a field visit in the main productive region of the country. The farm is characterized by implementing production systems focused on soil regeneration, environmental care, and adopting cutting-edge technology for several years.

Every farmer, specialist, university student, farmer association representative, decision-making politician and official delegation participating in the tour, will be able to explore the most advanced

productive models acknowledged by innovation, soil care and sustainability. In addition to participating in technical exchanges with farmers and local experts.

The proposal includes departure from Ciudad Autónoma de Buenos Aires (CABA) by bus, field visit, lunch and return to CABA, with an optional dinner & show at night.

About the 32° Aapresid Congress, with the strength of Expoagro

Every year, the Aapresid Congress is the place where sustainability paradigms debate with agricultural, economic and political strategies how to improve everyone's life. The most outstanding event regarding knowledge in the field of agriculture in Argentina and the region. A key event for updating, debating and showcasing technological advances.

Under the motto "Everything is connected", the 32° Congress will take place from August 7th to August 9th. This Congress seeks to be a reflection of the connection between healthy soils and daily food, as well as how Argentine agriculture is crucial in the fight against climate change.
